**Accelerate•OR™**  
The Fastest Way To Turnover Your OR

## Quality, Customer Focused, Mission Driven

### Reduce O.R. turnover time

The average time to turnover the O.R. for a new patient is 31.5 minutes. Best practice is 15 minutes. The Accelerate•OR Clean-Up Kit reduces turnover time, which can increase the number of procedures performed. Reducing inefficiencies improves financial results by increasing revenue and eliminating overtime pay.

The kit is conveniently fan-folded for easy-use.

### Prevents cross-contamination

- ▶ Accelerate•OR Clean-Up Kit is disposable, single-use kit that includes everything needed to turnover an O.R.
- ▶ Impervious sheets prevent the contact of fluids with the O.R. table, as well as reduces instances of pressure ulcers.

### Supports AORN best practices recommendation to use a fresh mop head for each O.R. turnover

### Bosma Accelerate•OR Clean-Up Kit includes:\*

- ▶ Impervious table sheet
- ▶ Lift sheet (can hold up to 500 lbs.)
- ▶ Two impervious arm board covers with arm straps
- ▶ Two 40"x40" clear draw tape bags
- ▶ 40"x40" red draw-tape bags
- ▶ 40"x40" blue draw-tape bags
- ▶ Two red kick-bucket bags
- ▶ Two disposable washcloths
- ▶ Disposable mop head (rayon or microfiber)

\* Can be customized to fit your hospitals specific needs
